2. Insurers must be transparent and proactive in informing enrollees about all deductibles, copayments and other out-of-pocket costs that enrollees may incur.
3. Insurers must maintain at all times an accurate and complete list of all in-network physicians. This information shall be contained in a public database, which must be easily accessible online by health care consumers.
4. Prior to scheduled procedures, insurers must provide enrollees with reasonable and timely access to in-network physicians.
5. Patients who are seeking emergency care should be protected under the “prudent layperson” legal standard as established in state and federal law, without regard to prior authorization or retrospective denial for services after emergency care is rendered.
6. Out-of-network payments must not be based on a contrived Medicare rate or a rate under the control of the insurance company.
7. In lieu of balance billing of patients, an appropriate and fair minimum benefit standard for unexpected out-of-network services should be created. The minimum benefit standard should accurately reflect reasonable physician charges, such as through the establishment of a charge-based reimbursement schedule connected to an independently recognized and verified database that is geographically specific, completely transparent, and independent of the control of either payers or providers.
8. The primary determinant in any provider-carrier dispute resolution process should be based on the usual and customary charges from an independently recognized and verified database that is geographically specific, completely transparent, and independent of the control of either payers or providers.
